

Lesson 08 Exercise b – Use SAP Menu Module

Objective

By the end of this exercise, you will be able to use the SAP Menu Standard Module to steer objects in the menu bar of your SAP GUI application.

Why is this important?

This is important because the SAP Menu Bar is a key part of the SAP GUI Window and helps you to navigate the application, even without knowing specific transaction codes or shortcuts.

Instructions

1. Within the TestStepFolder "**Overview**" in the "**01 Generate and Verify Sales Order**" TestCase, add the Module "**Create Standard Order: Overview: Enter Data in Fields**". Rename it to "**Input Material Data**". Input the values as shown below:

SAP Field	Value	Action Mode
Sold - To Party	1175	Input
Ship -To Party	1175	Input
PO Number	123	Input
All Items:(Enter the following values into the cells in the 1st row under the header*):		
Item	2	Input
Material	M-08	Input
Order Quantity	5	Input
Un	ST	Input

2. Add the Standard Module "**SAP Toolbar**" into the Folder "**Overview**" and rename it "**Press Enter**". Input the values as shown below:

TestStepValue	Value	Action Mode
Buttons	Enter	Input

3. Add the Standard Module "SAP Menu" into the Folder "Overview". Rename the TestStep "**Select Sales in SAP Menu**". Input the values as shown below:

TestStepValue	Value	Action Mode
Menubar	Goto->Header->Sales	Input

4. With SAP open to the Overview page, run the TestStepFolder "**Overview**" in ScratchBook.

Hints

- » Refer to Lesson 7 for table steering.
- » Make sure you have selected the correct ActionModes.
