

Automation Engineer Level 1

Exercise 3e

Send Mail

Objective

By the end of this exercise, you will be able to demonstrate how to use Tosca to send mails using **Send Mail** Standard Module of Tosca Mail Engine.

Why is this Important?

Many end-to-end testing scenarios include sending emails after a process is completed. The Mail Engine modules would come handy for such operations.

Project Perspective

In many end-to-end testing scenarios, email notification is verified, or an email confirmation is sent after a process has been completed.

Instructions

1. Navigate to **AE1 Exercises>>TestCase>>Email Engine>> Connect to Mail Server and Send Mail**
2. Add the Standard Module **Send Mail** in this TestCase
3. Input **Values** as shared in the table below:

TestStep Value	Value	Action Mode
Connection name	MailServerConnection	Input
From		Select
Address	<your_email_id>	Input
Name	<your_name>	Input
Subject	Test	Input
To	<your_email_id>	Input
Body	This is a test email	Input
Attachment	C:\Tosca_Projects\order_80880.pdf	Input

4. Mark this TestCase **Completed** and run it in Scratchbook

Expected Outcome

The TestCase will be executed successfully, and it will send an email as specified in the Send Mail TestStep.

Hints

The Send Mail module along with Connect to Mail Server or Connect to Exchange Server module can be used to send a new mail or reply to a received mail.
