

Lesson 04 Exercise – Create TestCase Structure

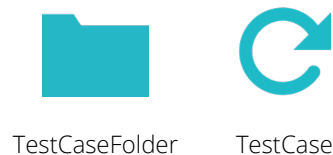

Objective

By the end of this exercise, you will be able to create a logical TestCase structure within Tosca and set the TestCase WorkState.

Why is this important?

A logical Folder structure within your TestCase makes your work easier to create and maintain. A clear Folder structure also helps with business readability of your TestCase.

Key elements:

Instructions

1. In the TestCases section, navigate to the TestCaseFolder **01 Tosca SAP GUI Automation >> Sales and Service Processes in ERP >> Order2Cash**. This Folder will contain all "Order to Cash" TestCases. Within the "Order2Cash" TestCaseFolder, create a new TestCase and name it "**01 Generate and Verify Sales Order**".
2. The TestCases are not automatically sorted numerically or alphabetically, so drag and drop your "**01 Generate and Verify Sales Order**" TestCase to the top of the list in the " **Order2Cash**" TestCaseFolder.
3. Change the WorkState of the TestCase "**01 Generate and Verify Sales Order**" from "**PLANNED**" to "**IN_WORK**".
4. Within the TestCase "**01 Generate and Verify Sales Order**", create the following TestStepFolders:
 - SAP Login
 - Open Transaction
 - Initial Screen
 - Overview
 - Header Data
 - Close Transaction
