Lesson 08 Exercise a – Use SAP Toolbar Module

Objective

By the end of this exercise, you will be able to use the SAP Toolbar Standard Module to steer objects in the toolbar of your SAP GUI application.

Why is this important?

This is important because the SAP Toolbar contains fields and buttons that are used in almost all SAP GUI TestCases.

Instructions

1. Add the Standard Module "**SAP Toolbar**" into the TestStepFolder "**Open Transaction**" (in the TestCase "**01 Generate and Verify Sales Order**") and rename the TestStep to "**Start VA01**".

2. Enter the following values for the TestStepValues as per the table below:

TestStepValue	Value	Action Mode
Transaction code	/nVA01	Input
Buttons	Enter	Input

3. Within the TestStepFolder "**Initial Screen**", add the Module "**Create Sales Order: Initial Screen: Enter Order Type and Organizational Data Fields**" and rename it "**Enter Order Type and Organizational Data Fields**". Input the values as shown below:

TestStepValue	Value	Action Mode
Order Type	OR	Input
Sales Organization	1000	Input
Distribution	12	Input
Division	00	Input

4. Add the Standard Module "**SAP Toolbar**" into the TestStepFolder "**Initial Screen**" and rename it "**Press Enter**". Input the values as shown below:

TestStepValue	Value	Action Mode
Buttons	Enter	Input

5. Select both the "**Open Transaction**" Folder and the "**Initial Screen**" Folder (you can do this by holding the **Ctrl** key while clicking on the TestStepFolders. Then right click and run those 2 Folders in the ScratchBook, or press **F6**, for Tosca to automate to the Overview page.
